<sup>1</sup>The American Community Survey (ACS) has been conducted annually by the U.S. Census Bureau since 2005. Whereas the Decennial Census (DC) strives to reach every residence and uses a brief form, the ACS targets a sample of the total population and includes many items (the ACS replaced the previous DC "Long Form"). Since ACS results are extrapolated from a sample of the population, to some extent there is a margin of error in the estimates. In some cases, data may appear to be inconsistent from one year to the next. However, ACS data is useful in monitoring trends over a period of time. Only the DC provides population data in single-age cohorts, while the ACS provides population data in certain age groups. For comparison with AISD enrollment, the combined age group of 5-17 is used (5-19 is also available, but not 5-18).

<sup>2</sup>From annual AEIS and TAPR reports generated by TEA.

<sup>3</sup>ACS data are available by a number of specific geographical areas, including school districts. All of the data presented pertain to the area specifically within the boundaries of AISD.

<sup>4</sup>Population age 25 and over.

<sup>5</sup>Births per 1,000 women ages 15-50.

<sup>6</sup>K-12 enrollment (not counting PK and EC) is probably the closest comparison to the 5-17 age group (see Footnote #1).

<sup>7</sup>Other than spouse or child.

<sup>8</sup>Language other than English.
