

2011-2012 AISD Student Climate Survey Garcia Middle School

Research indicates that school climate can either be a positive influence on students' learning environment, or can serve as a significant barrier to students' learning. Indeed, students attending high performing, higher economically disadvantaged schools reported higher ratings of behavioral environment, academic self-confidence, teacher expectations for student learning, and student engagement in 2010-2011 than did their peers at lower performing similar schools. Similarly, students attending high performing, less economically disadvantaged schools reported higher ratings of behavioral environment than did their peers at lower performing similar schools in 2010-2011.*

The following tables show the total number of surveys students at Garcia returned in 2011-2012 (Table 1), the response rate by grade (Table 2), and the distribution of responses by race/ethnicity compared with the population (Table 3) for students at Garcia.

The following pages contain more detailed information regarding Garcia's student climate results from 2009-2010 to 2011-2012. Please review the individual items on each subscale with particular attention to how Garcia's average ratings have changed or remained consistent over time. Please note that some subscales have changed from previous years, making longitudinal comparisons inappropriate for some items and subscales. For items and subscales where longitudinal data are available, statistically meaningful changes are noted with up or down arrows. Please share the results of this report with all campus staff and your Campus Advisory Council to inform campus improvement planning.
