

2009-2010 AISD Student Climate Survey

Harris Elementary School

Research indicates that school climate can be either a positive influence on the learning environment or a significant barrier to learning. In AISD, schools that performed better on TAKS also had higher student climate ratings (Schmitt & Carney, 2008). These survey results provide campuses with feedback about how students feel about their school's educational environment. Longitudinal data are provided, where applicable.

The image below displays factors that are known to be related to student academic growth. In this report, we focus on the role of school climate for students (circled in red), which has been measured with six survey subscales: academic self-confidence, adult fairness & respect, teacher expectations, teacher support, student engagement, and behavioral environment.

In Spring 2010, 218 students returned surveys for Harris, representing 83% of eligible students from Harris (compared to the district Elementary School response rate, 87%). The table below shows the total number and percentage of students surveyed from each eligible grade at Harris in 2009-2010.

Table 1. Response Rate by Grade, 2009-2010

Harris		
Grade	Population	Response Rate
3rd	93	66%
4th	89	100%
5th	80	85%
6th	n/a	n/a
Total	262	83%

Survey results for Harris for the 2009-2010 school year are presented on the next page. Please note the green and red text boxes that highlight specific areas in which Harris excels, as well as areas in which Harris can improve. The appendix provides more detailed information regarding Harris's student climate survey results from 2007-2008 through 2009-2010. Please review the individual items on each subscale with particular attention to how Harris's average ratings have changed or remained consistent over time. Please note that some subscales have changed from previous years, making longitudinal comparisons inappropriate for some items and subscales. For items and subscales where longitudinal data are available, statistically meaningful changes are flagged with + or - symbols. Please share the results of this report with all campus staff and your Campus Advisory Council to inform campus improvement planning.

The graph below depicts Harris’s average student climate survey ratings, compared with average ratings for students across all Elementary Schools in 2009-2010. Scores over 3.0 are desirable, as indicated by the red dashed line. The first step in improving these characteristics is to examine the item-level scores for each area (see Appendix).

Student Climate Survey Subscales for Harris and all Elementary Schools, 2009-2010

Note. The light purple bars represent 2009-2010 data for Harris and the dark purple bars represent 2009-2010 data for all Elementary Schools.

Harris’s highest subscale score on the 2009-2010 Student Climate Survey was for Teacher Expectations, a new subscale in 2009-2010 that measures the expectations students perceive from their teachers. It is believed that Teacher Expectations are associated with academic achievement. Please think about what your school does to foster high expectations, and share your strategies with others.

Harris’s lowest subscale score on the 2009-2010 Student Climate survey was for Behavioral Environment, which measures the extent to which students report feeling safe and respected at Harris. Higher ratings of Behavioral Environment have been associated with academic achievement. For resources on how to improve your campus’ Behavioral Environment, please visit AISD’s Positive Behavior Support (PBS) website: <http://www.austinisd.org/academics/sss/pbs/index.phtml>
